

MECHANICAL SEAL
US4A

CAT018 ENG REV 12.09

Hheavy duty solution for low and medium pressures operations are widely used in the chemical industry and waterworks. The US4A is the short version of US3A, single component seal with a type A pinned stationary seat and it allows rotation in two directions.

Because of the three drive lugs on the rotating body, they can tolerate high levels of vibration, and mechanical stress.

The "O" ring is easily removed and refitted when assembling the seal on shafts with keyways, threads or sharp edges.

The US4A version is supplied with a single spring and is more suitable for moderately dirty liquids.

NOTES:

- 1) The material shown on this page is only part of the available range, for other products stock items, please call our Technical Sales Office.
- 2) The material should be chosen according to the operating conditions. All queries should be sent to our Technical Sales Office.
- 3) The last letter of the product code US4A shows the type A stationary seat with a slot for an antirotation pin: or if a short stationary seat without a slot is required, please request type C. The product code will then be US4C. This type is not suitable for seals in PTFE.
- 4) When the material of the seal on the stationary seat "O" ring is the same as the seal on the rotary face "O" ring the product code is not repeated.
